Pinwheel

Cut out the square on this page. Stamp or decorate the square, then following the lines on this template, cut in from each corner, leaving the very center area uncut.

Gently bend one corner in to the center point. Skip the next cut corner, then bend the next one. Skip and bend the next corner in, repeating until four points meet in the center.

Fasten the four folded points into the center with a paper fastener or decorative brad. The brad can then be used to puncture through a narrow strip of cardboard or drinking straw to use as a pinwheel post.
